

Biomedical Engineering Seminar Series

1st Semester, Academic Year 2016

Date: August 30th , 2016

Time: 10.00-11.00 AM

Room 6459, 4th level, Building 3,
Department of Biomedical Engineering,
Faculty of Engineering;
Mahidol University

Dr. Takehito Hayami
Graduate School of Natural Science
Okayama University

"Technical Problems about Human Gaze Measurement"

I am interested in measuring unconscious behavior of human beings to understand humanity and to develop future medical systems. The eye of a human is a special organ to gain optical signals, which is controlled by autonomic nervous system even though anyone believes she can move it as her own way. I am concerned about improving physical precision of measuring human gaze to understand human visual system and to develop future devices to support human vision.
